

PROTEKT - PROJECT SYNOPSIS

1. Title

Helpline & Safety System for Quick Emergency Support

2. Introduction

In emergencies, every second matters. Many people struggle to remember helpline numbers or get the right help on time. This project aims to create a simple and reliable system where users can quickly find emergency contacts and trigger alerts when needed. The goal is to make help accessible, fast, and easy—so that anyone can respond better in difficult situations.

3. Scope

- Provide a single place for important helpline numbers.
- Offer safety guidance and simple navigation.
- Work on a responsive and easy-to-use web interface.

4. Methodology

1. Understand user needs and types of emergencies.
2. Design clean and simple screens.
3. Build the web interface using HTML, CSS, Bootstrap.
4. Test for usability and reliability.

5. Tools & Technologies

- HTML, CSS, Bootstrap, JavaScript
- MongoDB
- Figma
- GitHub for version control

- Netlify for hosting

6. Timeline

- Week 1: Research & planning
- Week 2: UI design
- Week 3–4: Development
- Week 5: Improvements
- Week 6: Testing
- Week 7: Documentation & final demo

7. Resources

- Laptop/PC
- Internet
- Design assets and helpline data from public sources
- GitHub / online tools

8. Expected Outcomes

- A working safety dashboard with essential helpline numbers
- A smooth emergency simulation
- A clean, responsive user interface
- A clear understanding of emergency-system workflow

9. References

- Government emergency helpline resources
- WHO safety guidelines
- MDN & Bootstrap documentation
- Public UI/UX design references
